POWERplus® SOLAR FLASHING KEYCHAIN

With the POWERplus® Solar Flashing Keychain you can make attention on your logo or message. The built-in solar cell creates every second a dark LCD field in the keychain. Because this flashes from dark to normal, it looks like the logo is flashing which gives a high attention value on your logo or message.

Just simply print a logo or message (in every color or full color) with a dimension of 5,0 x 1,8 cm and insert this little print into the solar flashing keychain through the little slide. Just lock the slide and now your keychain is ready. Simple and easy.

The keychains can be delivered in bulk or finished with a provided logo or message.
